| **Pre-requisite** | For 42480 EIE3120 Network Technologies and Security  
For 42470 EIE3333 Data and Computer Communications |
| **Exclusion** | Mobile Networking (EIE4104) |
| **Objectives** | This subject aims to provide students with an understanding of various security concerns in wireless networks (e.g., WiFi and mobile cellular networks) and mobile systems and applications (e.g., Android and iOS). |
| **Intended Subject Learning Outcomes** | Upon completion of the subject, students will be able to: |
| **Category A: Professional/academic knowledge and skills** | 1. Understand the security threats, concerns, and vulnerabilities in wireless and mobile systems, and the corresponding security mechanisms and authentication procedures  
2. Understand the strategies for developing secure mobile applications, and the use of mobile security penetration tools for evaluating the robustness of mobile applications  
3. Apply the knowledge to develop practical applications that are robust against mobile platform attack tools |
| **Category B: Attributes for all-roundedness** | 4. Understand the creative process when designing solutions to a problem |

### Subject Synopsis/Indicative Syllabus

**Syllabus:**

1. **Introduction to Mobile and Wireless Networks**  

2. **Vulnerability of Wireless Networks**  
Threats and risks to telecommunication systems, vulnerabilities from wired to wireless communications, fundamental security mechanisms.

3. **WIFI Security**  
Attacks on wireless networks, security in the IEEE 802.11 standard, security in 802.11i, authentication in wireless networks, layer 3 security mechanisms.

4. **Security in Mobile Telecommunication Networks**  
Vulnerability of signaling systems, GSM and GPRS security, 3G security, network interconnection.

5. **Mobile Systems and Development Strategies**  
Top issues facing mobile devices, tips for secure mobile application development, mobile HTML security, SMS security, mobile geolocation.

6. **Android and iOS Security**  
Android IPC mechanisms, security model, permission review, security tools.  
iOS security testing, application format, permissions and user controls.
Mobile security penetration testing tools.

**Teaching/Learning Methodology**

Lectures: The subject matters will be delivered through lectures. Students will be engaged in the lectures through Q&A, discussions and specially designed classroom activities.

Tutorials: During tutorials, students will work on/discuss some chosen topics in small group. This will help strengthen the knowledge taught in lectures.

Laboratory and assignments: During laboratory exercises, students will perform hands-on tasks to practice what they have learned. They will evaluate the vulnerability of systems and design solutions to problems. The assignments will help students to review the knowledge taught in class.

While lectures and tutorials will help to achieve the professional outcomes, the open-ended questions in laboratory exercises and assignments will provide the chance to students to exercise their creativity in problem solving.

**Assessment Methods in Alignment with Intended Subject Learning Outcomes**

**Student Study Effort Expected**

- Lecture: 24 Hours
- Tutorial/Laboratory/Practice Classes: 15 Hours

**Other student study effort:**

- Lecture: preview/review of notes; homework/assignment; preparation for test/quizzes/examination: 36 Hours
- Tutorial/Laboratory/Practice Classes: preview of materials, revision and/or reports writing: 30 Hours

**Total student study effort:** 105 Hours

**Reading List and References**

**Last Updated**

November 2014
